Good job Canon. The GL1 has nearly all of the manual controls that you could ask for. Users can manually control focus, white balance, iris and shutter speed. There are seven basic program modes. The most basic is the Easy Recording mode. This is a pure point-and-shoot mode with no manual control or digital effects.

The Canon XL-1's image stabilizer is visibly much more effective than on either stills camera. In fact, zoomed out to the max (677mm equivalent) the XL-1's stabilizer is amazingly steady. Whether that's worth the hassle of fiddling with firewire cables and the issues with tape you mention is the question, even if image quality is acceptable.

A concise treatment of variational techniques, focussing on Lagrangian and Hamiltonian systems, ideal for physics, engineering and mathematics students.

"Crop Modeling and Decision Support" presents 36 papers selected from the International Symposium on Crop Modeling and Decision Support (ISCMDS-2008), held at Nanjing of China from 19th to 22nd in April, 2008. Many of these papers show the recent advances in modeling crop and soil processes, crop productivity, plant architecture and climate change; the rests describe the developments in model-based decision support systems (DSS), model applications, and integration of crop models with other information technologies. The book is intended for researchers, teachers, engineers, and graduate students on crop modeling and decision support. Dr. Weixing Cao is a professor at Nanjing Agricultural University, China.

Written in the early eighth century, the Kojiki is considered Japan's first literary and historical work. A compilation of myths, legends,

songs, and genealogies, it recounts the birth of Japan's islands, reflecting the origins of Japanese civilization and future Shinto practice. The Kojiki provides insight into the lifestyle, religious beliefs, politics, and history of early Japan, and for centuries has shaped the nation's view of its past. This innovative rendition conveys the rich appeal of the Kojiki to a general readership by translating the names of characters to clarify their contribution to the narrative while also translating place names to give a vivid sense of the landscape the characters inhabit, as well as an understanding of where such places are today. Gustav Helldt's expert organization reflects the text's original sentence structure and repetitive rhythms, enhancing the reader's appreciation for its sophisticated style of storytelling.

The book offers an authoritative overview of the topical issues surrounding intra-industry trade in Europe in the era of European economic integration. It brings together expert contributors from eight of the European Union member states. The theory of intra-industry trade is discussed and assessed through a comprehensive study of the patterns of trade in Europe and the individual member states over a thirty year period. This detailed empirical analysis allows conclusions to be drawn on issues including the impact of

international trade on the domestic economy. The book arises from a major multinational programme co-ordinated from the University of Nottingham.

Proceedings of the Third Workshop on Computer Algebra in Scientific Computing, Samarkand, October 5-9, 2000

The first edition of “Microstrip Filters for RF/Microwave Applications” was published in 2001. Over the years the book has been well received and is used extensively in both academia and industry by microwave researchers and engineers. From its inception as a manuscript the book is almost 8 years old. While the fundamentals of filter circuits have not changed, further innovations in filter realizations and other applications have occurred with changes in the technology and use of new fabrication processes, such as the recent advances in RF MEMS and ferroelectric films for tunable filters; the use of liquid crystal polymer (LCP) substrates for multilayer circuits, as well as the new filters for dual-band, multi-band and ultra wideband (UWB) applications. Although the microstrip filter remains as the main transmission line medium for these new

developments, there has been a new trend of using combined planar transmission line structures such as co-planar waveguide (CPW) and slotted ground structures for novel physical implementations beyond the single layer in order to achieve filter miniaturization and better performance. Also, over the years, practitioners have suggested topics that should be added for completeness, or deleted in some cases, as they were not very useful in practice. In view of the above, the authors are proposing a revised version of the “Microstrip Filters for RF/Microwave Applications” text and a slightly changed book title of “Planar Filters for RF/Microwave Applications” to reflect the aforementioned trends in the revised book.

For this set of lectures we assumed that the reader has a reasonable back ground in physics and some knowledge of general relativity, the modern theory of gravity in macrophysics, and cosmology. Computer methods are present ed by leading experts in the three main domains: in numerics, in computer algebra, and in visualization. The idea was that each of these subdisciplines is introduced by an extended set of main lectures and that each is conceived as being of comparable 'importance. Therefpre we believe that the book represents a good

introduction into scientific computing for any student who wants to specialize in relativity, gravitation, and/or astrophysics. We took great care to select lecturers who teach in a comprehensible way and who are, at the same time, at the research front of their respective field. In numerics we had the privilege of having a lecturer from the National Center for Supercomputing Applications (NCSA, Champaign, IL, USA) and some from other leading institutions of the world; visualization was taught by a visualization expert from Boeing; and in computer algebra we took recourse to practitioners of different computer algebra systems as applied to classical general relativity up to quantum gravity and differential geometry.
