These papers of the Third National Trout Hepatoma Research Conference held in Portland, Oregon, March 18 and 19, 1965, are arranged in order of presentation and are reproduced in the form received. The results, discussions and opinions expressed are those of the individual or group represented and do not necessarily reflect the views of either the National Cancer Institute or the Department of the Interior. The purpose of this conference was to review the status of research on rainbow trout hepatoma, to arrange research discussions between the major active research groups in this field, and to project probable productive research programs for future efforts.

Regulatory Aspects of Carcinogenesis and Food Additives: The Delaney Clause is composed of papers and discussions presented in the seventh meeting of the International Academy of Environmental Safety regarding the philosophy of the Delaney Clause. The Delaney Clause became a part of the Food and Drug Law in 1958. It states in part "that no additive shall be deemed to be safe if it is found to induce cancer when ingested by man or animal, or if it is found after tests which are appropriate for evaluation of safety of food additives to induce cancer in man or animal . This book covers the different views of the meeting's participants on the interpretation of the Delaney Clause. It presents list of points that should be considered in making decisions with respect to safety. Many other factors that should be taken into consideration are also discussed in this reference.

Foundations of Biochemical Psychiatry provides information pertinent to the development of biochemical psychiatry, including biochemical studies of psychiatric patients before and after pharmacological intervention and genetic studies. This book discusses the development of biochemical psychiatry as a significant experimental and conceptual approach to understanding mental illness. Organized into 24 chapters, this book begins with an overview of the neurochemical processes involved in the elaboration of a behavior and the extent to which alterations in those processes are responsible for behavioral differences. This text then discusses the clinical characteristics of schizophrenia, including common symptoms, natural history, and subtypes. Other chapters consider the contribution of genetic factors to the etiology of schizophrenia. This book discusses as well the similarities among hallucinations, dreams, and primary process thinking. The final chapter deals with the factors that may influence the neuroendocrine system. This book is a valuable resource for psychiatrists, neuropharmacologists, neurobiologists, behavioral biologists, and psychoanalysts.

NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.
