A spreader is a device designed to lift containers. It is fitted to a reach truck, container handler, straddle carrier, rubber-tyred gantry crane or a rail-mounted gantry crane. The spreader has a twistlock on each corner that safely interlocks with the container to be lifted. We can be your partner for spreader parts.

This book provides an introduction to the whole concept of intermodal freight transport, the means of delivering goods using two or more transport modes, recounting both European experience and UK developments and reporting on the extensive political influences on this form of transport. This is placed into context with reference to developments in North America and Asia. Detailed explanations are given of the road and rail vehicles, the loading units and the transfer equipment used in such operations. In particular, the role of the Channel Tunnel in the development of long-haul combined transport operations between the UK and Europe is considered.

Vols. for 1970-71 includes manufacturers' catalogs.
