Since the early 1800's, children have been taught and encouraged to function as instructional agents for their classroom peers. However, it was not until the last decade that peer-mediated intervention was studied in a rigorous, systematic fashion. The purpose of this edited volume is to provide an up-to-date and complete account of empirical research that addresses the general efficacy of classroom peers as behavior change agents. As a result of various social and legal developments, such as the passage of Public Law 94-142 and its accompanying demand for individualized instruction, peer-mediated interventions seem likely to proliferate. As I have noted elsewhere (Strain, this volume), close adherence to the principle of individualized programming has rendered obsolete the "adults only" model of classroom instruction. Whether the utilization of peers in the instructional process comes to be viewed by school personnel as a positive adjunct to daily classroom practices depends in large measure on our ability to carefully design, conduct, and communicate the findings of applied research. I trust that this volume will function both to accurately communicate existing findings and to stimulate further study. My colleagues who have generously contributed their time and skill to this volume have my deepest appreciation. They have performed their various tasks in a timely, professional manner and, in my opinion, have provided considerable insight into the problems and potentials of peers as instructional agents.

First published in 1935, The Handbook of Social Psychology was the first major reference work to cover the field of social psychology. The field has since evolved and expanded tremendously, and in each subsequent edition, The Handbook of Social Psychology is still the foremost reference that academics, researchers, and graduate students in psychology turn to for the most current, well-researched, and thorough information covering the field of social psychology. This volume of the Fifth Edition covers the science of social psychology and the social being.

To succeed in school, students need more than subject area knowledge—they must learn how to learn. Self-regulation, an executive functioning skill, describes the ways that students focus attention on achieving success. Self-regulated learners find personal value in learning, develop effective study habits, welcome challenges, seek help, and use failure as a learning tool. This user-friendly guide makes the process of developing self-regulation as easy as ABC: Affect (how you feel), Behavior (what you do), and Cognition (how you think). Teaching students to balance these three elements builds motivation, resilience, and college and career readiness. Digital content includes customizable forms from the book.

Conversational participants in the classroom are not ordinary conversationalists, but conversationalists in a pedagogical multiparty community. A different speech exchange system may produce different problems and different opportunities of sequential organisation when we shift our attention from ordinary conversation to a different speech-exchange system. Understanding the Dynamics of Classroom Communication provides much-needed descriptions of communication within language classrooms, which acknowledge the importance of what teachers and students bring to the class environment, as well as what actually occurs during face-to-face communication within the classroom. Using authentic, naturally-occurring data, this book offers new insights into the sequencing of patterns of interaction that occur between individuals engaged in dynamic co-participation beyond the properties of individual learner language. In the final chapter, some implications for Second Language Acquisition are also discussed.

Voices from the Classroom illustrates that teachers have a leading voice in the policies that impact their students and the profession of teaching. The aim is to provide a rich and broad view of the impact of inquiry in the classrooms, from primary to higher education, and to provide a window into the perspective of teachers. Voices from the Classroom allows us to advance this mission by identifying and then turning educators' ideas into action. The publication includes chapters on issues ranging from dyslexic students' geospatial abilities to teachers' differential behaviours related, student characteristics and the experiences of refugees with bullying in the educational space. All the contributions published in this book emerged from real classrooms: our teachers and researchers conducted their research by drawing on their experience as educators. We believe that these insights into everyday classrooms, and the issues affecting them, are crucial to making teaching and learning better. We hope they can help drive real, positive change for students and teachers.

Using a topical approach to cover development from early childhood through adolescence, this book provides future teachers with authentic, research-based strategies and guidelines for their classrooms. The authors apply child development concepts to topics of high interest and relevance to teachers, including classroom discipline, constructivism, social-emotional development and well-being, and many others. A strong emphasis on individual and group diversity among children is reflected throughout. Field observation assignments help students to apply the science to children's experiences in the classroom. Case studies and real-world vignettes from authentic classroom situations further bridge the distance between research and the classroom. By linking theory, research, and practice -- and emphasizing application -- the book helps to equip future teachers with the tools to create an environment that promotes optimal development in children. Jason David BeDuhn reconstructs Augustine's decade-long adherence to Manichaeism, apostasy from it, and subsequent conversion to Nicene Christianity.

Augustine of Hippo is history's best-known Christian convert. The very concept of conversio owes its dissemination to Augustine's Confessions, and yet, as Jason BeDuhn notes, conversion in Augustine is not the sudden, dramatic, and complete transformation of self we likely remember it to be. Rather, in the Confessions Augustine depicts conversion as a lifelong process, a series of self-discoveries and self-departures. The tale of Augustine is one of conversion, apostasy, and conversion again. In this first volume of Augustine's Manichaeian Dilemma, BeDuhn reconstructs Augustine's decade-long adherence to Manichaeism, apostasy from it, and subsequent conversion to Nicene Christianity. Based on his own testimony and contemporaneous sources from and about Manichaeism, the book situates many features of Augustine's young adulthood within his commitment to the sect, while pointing out ways he failed to understand or put into practice key parts of the Manichaeian system. It explores Augustine's dissatisfaction with the practice-oriented faith promoted by the Manichaeian leader Faustus and the circumstances of heightened intolerance, anti-Manichaeian legislation, and pressures for social conformity surrounding his apostasy. Seeking a historically circumscribed account of Augustine's subsequent conversion to Nicene Christianity, BeDuhn challenges entrenched conceptions of conversion derived in part from Augustine's later idealized account of his own spiritual development. He closely examines Augustine's evolving self-presentation in the year before and following his baptism and argues that the new identity to which he committed himself bore few of the hallmarks of the orthodox with which he is historically identified. Both a historical study of the specific case of Augustine and a theoretical reconsideration of the conditions under which conversion occurs, this book explores the role religion has in providing the materials and tools through which self-formation and reformation occurs.

This book addresses some of the most fundamental questions that can be asked about target language (TL) acquisition in the classroom context, namely 1. What is negotiated interaction? 2. What are the main discourse functions of negotiated interaction? 3. How frequent is negotiated interaction in TL classrooms, and does this frequency vary by proficiency level? 4. To what extent does the initiation of negotiation overlap with the negotiation of power in such a setting of unequal-power discourse as the TL classroom? The negotiation process allows TL learners to obtain 'comprehensible input', to receive 'negative input', and to produce 'comprehensible output'. Since these are key variables in the acquisition process, by researching the negotiation work occurring in TL classroom discourse, the book fully contributes to the understanding of the process of interlanguage development in TL classrooms and thereby has major implications for TL teaching and teacher training. The book also contributes to further the understanding of negotiated interaction from a sociolinguistic standpoint: the asymmetrical nature of negotiation work in TL classrooms reflects the role and power relationships, the social organization, as well as the tacit interactional and cultural rules that seem to be at work in the TL classroom context.
