A comic-book introduction to economics from David Orrell, the author of *Economyths: 11 Ways Economics Gets it Wrong*. With illustrations from Borin Van Loon. Part of the internationally-recognised Introducing Graphic Guide series. Today, it seems, all things are measured by economists. The so-called 'dismal science' has never been more popular - or, given its failure to predict or prevent the recent financial crisis, more controversial. But what are the findings of economics? Is it really a science? And how can it help our lives? Introducing Economics traces the history of the subject from the ancient Greeks to the present day. Orrell and Van Loon bring to life the contributions of great economists - such as Adam Smith, Karl Marx, John Maynard Keynes and Milton Friedman - and delve into ideas from new areas such as ecological and complexity economics that are revolutionizing the field.

Capitalism now dominates the globe, both in economics and ideology, shapes every aspect of our world and influences everything from laws, wars and government to interpersonal relationships. "Introducing Capitalism" tells the story of its remarkable and often ruthless rise, evolving through strife and struggle as much as innovation and enterprise. Tracing capitalism from its beginning to the present day, Dan Cryan and Sharron Shatil, alongside Piero's brilliant graphics,

look at its practical and theoretical impact. They cover the major economic, social and political developments that shaped the world we live in, such as the rise of banking, the founding of America and the Opium Wars. This book explores the leading views for and against, including thinkers like Adam Smith, Karl Marx, Theodor Adorno and Milton Friedman, together with the connections between them and their historical context. Capitalism has influenced everything in the 21st-century world. For anyone who wants to gain a broad understanding of this fascinating subject, this book cuts across narrow academic lines to analyse an all-encompassing feature of modern life.

When should you adopt an aggressive business strategy? How do we make decisions when we don't have all the information? What makes international environmental cooperation possible? Game theory is the study of how we make a decision when the outcome of our moves depends on the decisions of someone else. Economists Ivan and Tuvana Pastine explain why, in these situations, we sometimes cooperate, sometimes clash, and sometimes act in a way that seems completely random. Stylishly brought to life by award-winning cartoonist Tom Humberstone, Game Theory will help readers understand behaviour in everything from our social lives to business, global politics to evolutionary biology. It provides a thrilling new perspective on the world we live in.

"Introducing The Enlightenment" is the essential guide to the giants of the Enlightenment - Voltaire, Diderot, Adam Smith, Samuel Johnson, Immanuel Kant, Benjamin Franklin, and Thomas Jefferson. The Enlightenment of the 18th century was a crucial time in human history - a vast moral, scientific and political movement, the work of intellectuals across Europe and the New World, who began to free themselves from despotism, bigotry and superstition and tried to change the world. "Introducing The Enlightenment" is a clear and accessible introduction to the leading thinkers of the age, the men and women who believed that rational endeavour could reveal the secrets of the universe.

What is psychotherapy? How can we choose wisely from so much on offer? This book provides a valuable summary of the main therapies: the "talking cures" of psychoanalysis, behavioral and cognitive techniques, somatic solutions, humanist gestalt and existential approaches, and individual and group therapies.

From the medicine we take, the treatments we receive, the aptitude and psychometric tests given by employers, the cars we drive, the clothes we wear to even the beer we drink, statistics have given shape to the world we inhabit. For the media, statistics are routinely 'damning', 'horrifying', or, occasionally, 'encouraging'. Yet, for all their ubiquity, most of us really don't know what to make of statistics. Exploring the history, mathematics, philosophy and practical use of statistics, Eileen Magnello - accompanied by Bill Mayblin's intelligent graphic illustration - traces the rise of statistics from the ancient Babylonians, Egyptians and Chinese, to the censuses of Romans and the Greeks, and the modern emergence of the term itself in Europe. She explores the 'vital statistics' of, in particular, William Farr, and the mathematical statistics of Karl Pearson and R.A. Fisher. She even tells how knowledge of statistics can prolong one's life, as it did for evolutionary biologist Stephen Jay Gould, given eight months to live after a cancer diagnoses in 1982 - and he lived until 2002. This title offers an enjoyable, surprise-filled tour through a subject that is both fascinating and crucial to understanding our world.

Provides an introduction to the principles of both microeconomics and macroeconomics that features graphic representations of key concepts.

Logic is the backbone of Western civilization, holding together its systems of philosophy, science and law. Yet despite logic's widely acknowledged importance, it remains an unbroken seal for many, due to its heavy use of jargon and mathematical symbolism. This book follows the historical development of logic, explains the symbols and methods involved and explores the philosophical issues surrounding the topic in an easy-to-follow and friendly manner. It will take you through the influence of logic on scientific method and the various sciences from physics to psychology, and will show you why computers and digital technology are just another case of logic in action.

Essential illustrated guide to key ideas of political thought. Philosophers have always asked fundamental and disturbing questions about politics. Plato and Aristotle debated the merits of democracy. The origins of society, the state and government authority were issues addressed by Hobbes, Rousseau, Hegel, Marx and many other philosophers. Introducing Political Philosophy explains the central concepts of this intriguing branch of philosophy and presents the major political theorists from Plato to Foucault. How did governments get started? Why should they be obeyed? Could we live without them? How much power should they have? Is freedom a right? Which is the best form of government? In the wake of consumerism and postmodernism, our need for a better grasp of political ideas is greater than ever. Dave Robinson's account of this complex subject is always clear, informative and accompanied by the entertainingly inventive illustrations of Judy Groves.
