Molecules Concept 5.1

Read Book

Structure

Macromolecules are polymers, built from monomers 1. The large molecules of all living things fall into just four main classes. Name them. Carbohydrates, Lipids, Proteins, Nucleic Acids 2. Circle the three classes that are called macromolecules. Define macromolecule.

The function of carbohydrates is to act as an energy source for storage and structure for all living things. For plants, starch is the chief energy source and cellulose is what provides structure and support. For animals, glycogen supplies energy and chitin provides the structure and support.
