example debit transaction from an account which consists of following operations:

DBMS Transaction Processing Concept - javatpoint

Description. Transaction processing is designed to maintain a system's Integrity (typically a database or some modern filesystems) in a known, consistent state, by ensuring that interdependent operations on the system are either all completed successfully or all canceled successfully.. For example, consider a typical banking transaction that involves moving \$700 from a customer's savings ...

Transaction processing techniques are deeply ingrained in the fields of databases and operating systems and are used to monitor, control and update information in modern computer systems. This book will show you how large, distributed, heterogeneous computer systems can be made to work reliably.

Transaction Processing (??)

The transaction concept emerges with the following properties: Consistency: the transaction must obey legal protocols.

Download Ebook Transaction Processing

Atomicity: it either happens or it does not; either all are bound by the contract or none are. Durability: once a transaction is committed, it cannot be abrogated.

Systems

The Transaction Concept: Virtues and Limitations

Transaction processing techniques are deeply ingrained in the fields of databases and operating systems and are used to monitor, control and update information in modern computer systems. This book will show you how large, distributed, heterogeneous computer systems can be made to work reliably.
